

Extremely powerful response

Our AI mentor has extremely powerful response that is close to 100% uniqueness, rendering it undetectable to plagiarism checkers

Lesser response time

Our AI mentor has much lesser response time than other Large Language Models because of the use of efficient transformer pipelines and tensor processing

Highly Contextual

The AI mentors are specifically trained on specialised subjects so they always provide answers based on the subjects they're trained.

Huge parameter base

The AI model Mixtral has 13 Billion parameters out of which 7 Billion are used for inference based analysis.

User Friendly Interface

The user interface is made in such a way that any new user will be able to navigate around different models in a short span of time.
